COVID-19: Quarantine vs. Isolation

**QUARANTINE** keeps someone who was in close contact with someone who has COVID-19 away from others.

- Stay home until 14 days after your last contact.
- Check your temperature twice a day and watch for symptoms of COVID-19.
- If possible, stay away from people who are at higher-risk for getting very sick from COVID-19.

**If you had close contact with a person who has COVID-19**

**ISOLATION** keeps someone who is sick or tested positive for COVID-19 without symptoms away from others, even in their own home.

- Stay home until after
  - 3 days with no fever and
  - Symptoms improved and
  - 10 days since symptoms first appeared

**If you are sick and think or know you have COVID-19**

- If you tested positive for COVID-19 but do not have symptoms
  - Stay home until after
    - 10 days have passed since your positive test.

**If you tested positive for COVID-19 but do not have symptoms**

- If you live with others, stay in a specific “sick room” or area and away from other people or animals, including pets. Use a separate bathroom, if available.
